

FOR IMMEDIATE RELEASE

NFive Names DigiOn24 as Master Distributor for Americas

Simi Valley: NFive, a world leader in card and label printing software, announced today that DigiOn24 will become its Master Distributor for the Americas. The Americas territory includes the United States, Canada, Mexico and South America. As master distributor, DigiOn24 will be responsible for all sales and technical support for NFive products in the territory.

DigiOn24 was selected because of its team's extensive knowledge of, and experience with, NFive products. Many senior members of DigiOn24 have been involved with NFive since it was founded in 1996. The additional benefit of DigiOn24's expertise in RF contactless smart card technology also contributed to their appointment as NFive master distributor.

"DigiOn24's excellent product knowledge and experience are unparalleled in the industry," said Vitor Marques, NFive founder and CEO. "I have known many players on the DigiOn24 team for ten-plus years, so there is a great deal of trust built between us."

DigiOn24 is a good fit for NFive because they complement NFive's commitment to supporting resellers and because both companies remain printer vendor neutral. With similar outlooks on integration, they make great partners in their mutual desire to provide best-in-class support to the reseller channel in the automatic identification market.

"This was a strategic partnership," says Loc Tran, founder and President of DigiOn24. "NFive resellers will get full service and support from DigiOn24 for CardFive software, as well as direct access to the DigiOn24 RF encoders, ribbon shredder, inventory cabinets and all the other many innovative secure value-added products produced by DigiOn24."

NFive resellers will benefit from DigiOn24's accessibility and they will be provided free technical support for software. DigiOn24 will also offer guidance in implementation of Prox, Mifare, and iCLASS contactless smart card encoding technology. NFive resellers can have full confidence, with DigiOn24's RF-experienced staff supporting their needs.

The goal for DigiOn24 is to ensure that integrators receive a higher level of software and hardware support which will allow their business to thrive and grow.

"With the ID card market changing to include RF contactless smart card technology, DigiOn24 RF encoders combined with proven CardFive software provides a great value to our partners," said Tran. "We can assist and help our resellers learn, and participate in this exciting new field and at the same time increase their value added."

NFive software is now available and ready for shipping in the Americas through DigiOn24.
